

Exciting news!

tinyforest planting in Paignton Park, N15

what3words location: [///trades.lots.cattle](https://trades.lots.cattle)

Proposed location of your Tiny Forest

What is a Tiny Forest?

A Tiny Forest is a dense and fast-growing woodland made up of 600 native trees, planted in an area the size of a tennis court. It uses the Miyawaki tree planting method, where a community of native trees that include the different layers found in a mature forest, are planted close together. This allows our Tiny Forests to develop rapidly and form a multi-layered forest ecosystem. The Tiny Forest is being created for everyone to use and enjoy.

How can I get involved?

- Haringey Council and Earthwatch want to know what you think about the proposed location of this Tiny Forest. Please do contact us via email treeplanting@haringey.gov.uk to ask us any questions about this project and share your thoughts with us.
- You can volunteer as a 'Tree Keeper' and help to nurture your Tiny Forest.
- Earthwatch will be testing soil, researching the best native trees and planning a community planting event where you can come to help plant the trees!

Community planting day at Eelbrook Common

4 year old Tiny Forest in Witney, Oxfordshire

Let us know what you think!
Reach out via email, you can contact us at:

Trees retain water, increase local water storage, cool the local environment and take up carbon dioxide.

Tiny Forests support rich wildlife and can attract over 500 animal and plant species within the first three years.

The whole community can use the Tiny Forest as a place to learn, play and enjoy nature.
